MOHD FARID BIN ABDUL KADIR, P.Geol

SIMPOSIUM MAKLUMAT GEOSPATIAL KEBANGSAAN (NGIS) 9
18 OKTOBER 2023
PICC, PUTRAJAYA

TANAH RUNTUH!

Tanah runtuh merupakan salah satu jenis bencana yang sering berlaku di Malaysia dan telah meragut banyak nyawa dan kerosakan harta benda.

Rekod tanah runtuh mengikut negeri

| | |
|--|-----------------|
| 6418 | 592 |
| rekod tanah | kematian |
| Rekod tanah runtuh dari tahun 1961 hingga 2023 | |

Trend kejadian tanah runtuh dan kematian mengikut tahun

Highland Tower (1993) 48 kematian

Keningau, Sabah (1996) 302 kematian

Taman Hillview (2002) 8 kematian

Batang Kali (2022) 31 kematian

**PERANAN JMG
DALAM
PENGURUSAN
BENCANA
GEOLOGI
TANAH RUNTUH**

1

Memetakan kawasan bencana geologi tanah runtuh dan mengenal pasti zon bahaya dan risiko

2

Pembangunan pangkalan data geospasial bencana geologi tanah runtuh

3

Mengenal pasti dan menyediakan input Pembangunan Sistem Amaran Awal Tanah Runtuh

4

Kerjasama pintar dalam pemulihan dan konsep mitigasi

5

Memperkasa komuniti rentan serta melahirkan jaguh setempat (*local champion*) di peringkat komuniti

1 Airborne LIDAR data captured

IMPLEMENTATION FRAMEWORK – SLOPE HAZARD AND RISK MAPPING

$$\begin{aligned} \text{Risk} &= \text{Probability of losses occurring} \\ \text{Risk} &= \text{Hazard} * \text{Vulnerability} * \text{Amount} \\ &= \text{Temporal probability} * \text{Consequences or losses} \\ &= \text{Temporal probability} * \text{Degree of loss to Elements at risk} * \text{Quantification of Elements at risk} \end{aligned}$$

8 Landslide Susceptibility Analysis

9 Landslide hazard & risk Assessment

10 Geotechnical Risk Assessment

LIGHT DETECTION AND RANGING (LiDAR)

Digital Surface Model (DSM)

Digital Terrain Model (DTM)

Airborne Laser Scanning (ALS)

Terrestrial Laser Scanning (TLS)

SPEKIFIKASI KHAS ALS

KEPADATAN POINT CLOUD

Sekurang-kurangnya 8 titik/m² bagi setiap tile 1 km².

MISI PENERBANGAN

Tinggi penerbangan : < 800 m AGL
Laju penerbangan: < 600 knot

ORTOFOTO

Resolusi 0.25 m atau lebih baik

FULL-WAVEFORM LiDAR

Sensor LiDAR perlu mempunyai keupayaan bagi menawan full-waveform LiDAR data

DTM

Resolusi 0.25 m atau lebih baik

TERRESTRIAL LASER SCANNING (TLS)

Reigl VZ400

Teknologi LiDAR membantu dalam mengenalpasti parut tanah runtuh yang telah dilitupi oleh pokok-pokok.
(Lokasi: Kundasang, Sabah)

HAZARD AND RISK ASSESSMENT FRAMEWORK

A: Input data

B: Susceptibility assessment

C: Hazard assessment

D: Exposure analysis

E: Vulnerability assessment

F: Risk assessment

G: Quantitative risk

H: Qualitative risk

I: Risk reduction measures

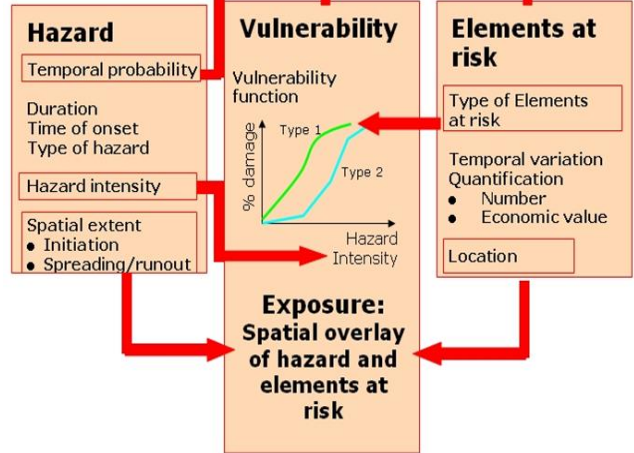

LANDSLIDE RISK ASSESSMENT FRAMEWORK

Risk = Probability of losses occurring

$$\text{Risk} = \text{Hazard} * \text{Vulnerability} * \text{Amount}$$

$$= \text{Temporal probability} * \text{Consequences or losses}$$

$$= \text{Temporal probability} * \text{Degree of loss to Elements at risk} * \text{Quantification of Elements at risk}$$
